Master the essentials

A great low-cost signal analyzer surpasses the basics and delivers crucial functionality. That's the strength of the CXA signal analyzer, the leading low-cost tool for essential signal characterization. Its capabilities provide a foundation for cost-effective testing and seamless integration with the other X-Series models. The CXA is also an excellent teaching tool for RF and microwave technologies and signal analysis. Get must-have capability with X-Series expandability in the CXA-and master the essentials.

Definitions and Conditions

Specifications describe the performance of parameters covered by the product warranty and apply to temperature ranges 5 to 50 °C, unless otherwise noted.

95th percentile values indicate the breadth of the population (approx. $2~\sigma$) of performance tolerances expected to be met in 95 percent of the cases with a 95 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

Typical describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

Nominal values indicate expected performance, or describe product performance that is useful in the application of the product, but are not covered by the product warranty.

The analyzer will meet its specifications when:

- · It is within its calibration cycle
- Under auto couple control, except when Auto Sweep Time Rules = Accy
- The analyzer has been stored at an ambient temperature within the allowed operating range for at least two hours before being turned on; if it had previously been stored at a temperature range inside the allowed storage range, but outside the allowed operating range
- The analyzer has been turned on at least 30 minutes with Auto Align set to normal, or, if Auto Align is set to off or partial, alignments must have been run recently enough to prevent an Alert message; if the Alert condition is changed from Time and Temperature to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user

For more information

This CXA signal analyzer data sheet is a summary of the complete specifications and conditions for N9000A CXA signal analyzers (including N9000AEP Express CXA signal analyzers), which are available in the CXA Signal Analyzer Specification Guide. The CXA Signal Analyzer Specification Guide can be obtained on the web at:

www.agilent.com/find/ cxa_manuals

For ordering information, refer to the CXA Signal Analyzer Configuration Guide (5990-4341EN).

Frequency and Time Specifications

Frequency range	DC couple	ed	AC coupled	
Option 503	NA		9 kHz to 3.0 GHz	
Option 507	NA		9 kHz to 7.5 GHz

- 1. Analysis bandwidth is the instantaneous bandwidth available around a center frequency over which the input signal can be digitized for further analysis or processing in the time, frequency, or modulation domain.
- 2. Sweep points = 101.

Amplitude Accuracy and Range Specifications

General Specifications

Temperature range	
Operating	5 to 50 °C
Storage	-40 to 70 °C

EMC

Complies with European EMC Directive 2004/108/EC

- IEC/EN 61326-1 or IEC/EN 61326-2-1
- · CISPR Pub 11 Group 1, class A
- AS/NZS CISPR 11:2002
- ICES/NMB-001

This ISM device complies with Canadian ICES-001

Cet appareil ISM est conforme à la norme NMB-001 du Canada

Safety

Complies with European Low Voltage Directive 73/23/EEC, amended by 93/68/EEC

- IEC/EN 61010-1 2nd Edition
- Canada: CSA C22.2 No. 61010-1
- USA: UL 61010-1 2nd Edition

Audio noise	
Acoustic noise emission	Geraeuschemission
LpA < 70 dB	LpA < 70 dB
Operator position	Am Arbeitsplatz
Normal position	Normaler Betrieb
Per ISO 7779	Nach DIN 45635 t.19

Environmental stress

Samples of this product have been type tested in accordance with the Agilent Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation, and end-use; those stresses include, but are not limited to, temperature, humidity, shock, vibration, altitude, and power line conditions; test methods are aligned with IEC 60068-2 and levels are similar to MILPRF-28800F Class 3.

≤ 3.0	≤ 10	± 0.5 °	0.2 °
3.0 < f ≤ 7.5	≤ 10	± 1.5 °	0.4 °
Data acquisition (standard 10	MHz IF path)		
Time record length	4,000,000 IQ sample p	airs	
Sample rate	30 MSa/s		
ADC resolution	14 Bits		
Option B25 25 MHz analysis I	pandwidth		
IF frequency response (demodulat		e to the center frequency,	20 to 30 °C)
Center frequency (GHz)	Span (MHz)	Max. error	RMS (nominal)
≤ 3.0	10 to ≤ 25	± 0.45 dB	0.03 dB
3.0 < f ≤ 7.5	10 to ≤ 25	± 0.45 dB	0.65 dB
IF phase linearity (deviation from	mean phase linearity, nomin	al)	
Center frequency (GHz)	Span (MHz)	Peak-to-peak	RMS
$0.02 \le f < 3.0$	10 to ≤ 25	± 0.8 °	± 0.3 °
$3.0 < f \le 7.5$	10 to ≤ 25	± 1.5 °	± 0.4 °
Data acquisition (B25 IF path
