Series 68100A/B Synthesized Sweep Generator Instrument Driver for LabWindows

User's Guide

Version 1.00

Locate the Serial Number decal sheet packaged with the manual, and paste the driver software serial number here.

Serial Number

You will be asked for this number when you call Wiltron Customer Service for support.

Wiltron

P/N: 10570-00010 REVISION A: PRINTED: MARCH 1994 COPYRIGHT 1994 WILTRON COMPANY

Limited Warranty

The media on which you receive Wiltron Company software are warranted not to fail to execute programming instructions, due to defects in materials and workmanship, for a period of 90 days from date of shipment, as evidenced by receipts or other documentation. Wiltron Company will, at its option repair or replace software media that do not execute programming instructions if Wiltron Company receives notice of such defects during the warranty period. Wiltron Company does not warrant that the operation of the software shall be uninterrupted or error free.

EXCEPT AS SPECIFIED HEREIN, WILTRON COMPANY MAKE NO WARRANTIES, EXPRESS OR IMPLIED, AND SPE-CIFICALLY DISCLAIMS ANY WARRANTY OF MERCHANT-ABILITY OR FITNESS FOR A PARTICULAR PURPOSE. CUSTOMER'S RIGHT TO RECOVER DAMAGES CAUSED BY FAULT OR NEGLIGENCE ON THE PART OF WILTRON COM-PANY SHALL BE LIMITED TO THE AMOUNT THERETO-FORE PAID BY THE CUSTOMER. WILTRON COMPANY WILL NOT BE LIABLE FOR DAMAGES RESULTING FROM LOSS OF DATA, PROFITS, USE OF PRODUCTS, OR INCIDEN-TAL OR CONSEQUENTIAL DAMAGES, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

The aforestated limitation of the liability of Wiltron Company will apply regardless of the form or action, whether in contract or tort, including negligence. Any action against Wiltron Company must be brought within one year after the cause of action accrues. Wiltron Company shall not be liable for any delay in performance due to causes beyond its reasonable control. The warranty provided herein does not cover damages, defects, malfunctions, or service failures caused by owner's abuse, misuse, or negligence acts; and power failure or surges, fire, flood, accident, actions or third parties, or other events outside reasonable control.

Copyright

Under the copyright laws, this book may not be copied, photocopied, reproduced, translated — in whole or in part — without the written consent of WILTRON Company.

Preface

The 681XXA/B LabWindows Instrument Driver User's Guide provides a tutorial and both general and detailed descriptions of the various functional panels displayed in the LabWindows environment. The user should be familiar with measurements using the applicable WILTRON instrument and with MS- or PC-DOS conventions. A knowledge of LabWindows, while helpful, is not essential. The WILTRON Instrument Drivers software can be used to create executable stand-alone application programs.

Manual Organization

The manual is divided into three sections:

Section 1, General, provides general information and a tree structure for the Instrument Driver function panels.

Section 2, Using the 681XXA/B Driver with LabWindows, provides description and a tutorial for using the driver within the LabWindows environment.

Section 3, Driver References, provides detailed descriptions of the function panels and instrument controls. It also provides sample syntax and a listing of variable-type used in the program.

Section 1 — Introduction to 681XXA/B Instrument Driver for LabWindows

Section 1

Introduction to the 681XXA/B Synthesized Sweep Generator Driver for LabWindows

Section 1 Introduction to the 681XXA/B Synthesized Sweep Generator Driver for LabWindows

General

WILTRON Instrument Drivers software provides an easy-to-use tool for developing application programs for applicable microwave systems via the General Purpose Interface Bus (IEEE-488 Bus).

This software contains modules that automatically configure an applicable WILTRON instrument for use on the bus, along with high-level instrument control commands that save you the time required to learn and program the GPIB commands of the instrument. The software automatically checks for proper bus functioning. If a command is sent to a bus instrument and no error is reported, the bus can be assumed to be working correctly.

Requirements

The WILTRON Instrument Driver software is written specifically for the model 681XXA/B.

The WILTRON Instrument Driver requires an IBM PC AT, PS/2, or compatible computer running MS- or PC-DOS, Version 3.0 or later.

The software is delivered on 5-1/4 inch 1.2 Mb Floppy disks and 3-1/2 inch 1.4 Mb floppy disks.

At least 2 MB of memory is required to run the LabWindows program — 4 Mb is recommended.

The WILTRON Instrument Driver software requires National Instruments LabWindows version 2.2 or later.

For Microsoft QuickBASIC*, Professional BASIC, Visual BASIC for DOS, C, Quick C, and Borland C++ and Turbo C++ users, you can use the 681XX Instrument Driver software to produce compatible instrument-control-program code.

^{*} Wiltron strongly recommends that QuickBASIC not be used. Instead, use Microsoft Professional BASIC 7,1, or later, or Visual BASIC for DOS.

Installing Instrument Drivers

This section provides instructions for installing the WILTRON Instrument Drivers. Proceed as follows:

- □ Insert the WILTRON driver diskette in your A: or B: drive, as appropriate.
- □ Change to the LabWindows, Instruments directory (*drive*\LW\INSTR), and type the following DOS command: COPY A: (B:) *.*. This copies the following four files to the target subdirectory: W681.LBW, W681.LWI, W681.FP, W681.DOC (All four of these files MUST reside within the same subdirectory.)
- Once the copying is completed, return the driver diskette to a safe storage location.

Overview For LabWindows Users

LabWindows is a software development system for BASIC, C, and C++ programs (see page 1-3 for listing of supported languages). It contains an interactive environment for developing programs with drivers and libraries (functions) for creating data acquisition and instrument control applications. LabWindows contains a comprehensive set of software tools for data analysis, data presentation, and high level instrument control.

The interactive program is an environment for editing and debugging BASIC and C (C++) programs. In the LabWindows environment, you can use the functions in the instrument drivers or libraries to write your program. In addition each function has an interface called a function panel that lets you interactively execute the function or generate code for calling the function.

The interactive program uses extended memory. Programs executed in the interactive program can use up to 16 megabytes of memory, depending on your computer configuration. Programs that run in the interactive program, however, must adhere to the LabWindows subsets for BASIC, C and C++.

Programs developed with the drivers and library functions can be run within the interactive program, or they can be compiled and linked into a stand-alone applicaton (*.EXE) or run-time application (*.RTM) file. To help you create a stand-alone program, LabWindows incorporates utilities that automate the compile and link processes.

The real power of LabWindows lies in the libraries. They have functions for developing all phases of your data acquisition and instrument control system. For controlling the 681XXA/B, Lab Windows has the Instrument Drivers Library. The programs that call this library can be developed with the interactive program. This program has tools that make program development quicker and easier.

LabWindows gives you the capability to execute instrument drivers with the aid of panels and thereby create programs easily. The panels contain items that can be selected to build and execute a driver. The drivers are separately declared in the Instrument Drivers Library.

Two advantages of using LabWindows are:

- □ When writing an application program you do not have to remember all of the parameters that belong to the driver.
- Error reporting is shown automatically in the panels.

Overview for Non-LabWindows Users

Programmers who do not use LabWindows will also benefit from the WILTRON Instrument Driver software:

- □ You will not have to know all of the GPIB codes needed to program applications for the 681XX Synthesized Sweep Generator. The driver software effectively manages low-level GPIB I/O operations and native instrument control.
- ☐ You will see greater program reliability because of the driver's extensive error-checking routines.
- ☐ You will see reductions in the time required to develop, test, and debug applications.

Section 2

Using the 681XXA/B Instrument Driver with LabWindows

Section 2 Using the 681XXA/B Instrument Driver with LabWindows

Introduction

This section provides an introduction to the LabWindows environment and a tutorial describing the use of the 681XXA/B driver within LabWindows. This section assumes that you have read Part 1 of the National Instruments *Getting Started with LabWindows* manuals and are generally familiar with the LabWindows screen and principles of navigation within the environment.

General

The following procedure describes how to access LabWindows and load files.

- □ Move to the directory containing the LabWindows executable (*.EXE) files. (This directory is usually named \LW.)
- □ Type LW.

This places you in the PROGRAM window of the LabWindows environment (below).

Loading 681XXA/B Driver As Instrument Module

The following procedure describes how load the 681XXA/681XXB (681XXA/B) Driver as an instrument module.

□ Select **Instruments**, on the top menu bar (below), to display the pulldown menu.

Select Load, then change to the \LW\INSTR subdirectory (below).

□ Move the cursor to **w681.fp** and select **Load**.

☐ You are now ready to proceed with developing control code using the 681XXA/B instrument driver.

Loading 681XXA/B Driver At Start-up

The 681XXA/B driver can be automatically loaded each time LabWindows is started. The procedure for making this happen is given below.

- □ Place yourself into the LabWindows PROGRAM window as was described on page 2-3.
- □ Select **Options**, on top menu bar, to display the pull-down menu.
- □ Select Startup Defaults.

□ Choose the \LW\INSTR subdirectory from the file list.

- □ Choose w681.fp from the displayed file list, and click on Load.
- □ The appropriate path will now be displayed in the INSTRUMENT MOD-ULES window. Select **OK** to exit. The W681 driver will now be loaded automatically each time LabWindows is entered.

Debug Utility

The 681XXA/B LabWindows driver incorporates a unique Debug utility, which should be used for program development only. It should be disabled when compiling stand alone applications.

Error 305 is returned when the instrument has generated an unexpected SRQ. To determine the cause of the SRQ set the **Debug** switch to **On** (Debug%=1), the driver will respond with a specific 3XX error code (Table 2-1).

Table 2-1.	Error	Codes
------------	-------	-------

Tutorial

This tutorial takes you through the development of a simple program. This program initializes the 681XXA/B Synthesized Sweeper, assigns sweep frequencies and modulation parameters, and closes the driver. When you have finished stepping through the tutorial, you will have a BASIC program that can be compiled as a DOS executable (*.EXE) file. A Microsoft C program could be produced in the exact same manner by switching the native language to C (under the **Program** menu).

Move cursor to Instruments in the top menu bar, and select Wiltron 681XXA/B Synthesized Sweeper. This will display the pull-down menu shown below.

Fil PRC	.e Edit)GRAM=====	Program	Instruments	Libraries	View	Options	ر م QuickBASIC

Choose **Select** to display the Initialize panel (below).

□ With the **Source Address** highlighted as shown, enter the 681XXA/B GPIB address (a number between 1 and 30; 5 is the default).

- Select Go! (below) in the top menu bar. If a 681XXA/B is connected and set to GPIB address 5, it will respond by resetting itself and returning an identification string that will fill the Model Number, Firmware Rev, Minimum Frequency, Maximum Frequency, Serial Number, Minimum Output Power, and Maximum Output Power fields.
- Leave Debug Flag set to Off. This switch was discussed on page 2-6.

- □ If there are no program errors triggering a syntax error message, you will see the 681XXA/B Synthesized Sweeper respond to the program code.
- □ After you are satisfied that the program runs correctly, you can use the **Create.EXE** option, on the File menu, to create a stand-alone DOS executable (*.EXE) file. Alternatively, you can use the **Create RTM** option, on the file menu, to create a run-time version (*.RTM) file. That operation is described in the next heading.
- \Box To continue with this tutorial, save this program as $\LW\PROGRAMS\681SAMP.BAS$

Creating a Compiled Program

Most programs developed with LabWindows can be compiled with the Microsoft C or BASIC compiler. Some applications, however, become too large to compile and run in the 640 KB DOS memory and must be run within LabWindows or the LabWindows Run-Time System. The LabWindows Run-Time System includes a DOS extender so programs can access up to 16 MB of memory during execution. Programs executed in the runtime system can make calls to any of the LabWindows libraries and instrument drivers. Programs distributed with the run-time system are in a binary format, so the programs cannot be edited.

A stand-alone application (*.EXE or *.RTM) that incorporates the 681XXA/B Driver may be created using the Microsoft C or BASIC compilers or LabWindows Run-Time System. To avoid OUT OF MEMORY errors when using the Microsoft QuickBASIC compiler, you must first optimize the 681XXA/B Driver memory usage with the LabWindows FUNNEL.EXE utility (See the LabWindows User's Manual for instructions).

The LWMAKE option on the file menu can be used to create an executable file in either BASIC or C. The following provides a step-by-step tutorial for creating a *.EXE file using the BASIC compiler. This tutorial assumes that you have read and are familiar with the LWMAKE utility description in the *Lab Windows User's Manual*.

We will start with the program that you completed in the preceeding tutorial. If you did not complete the tutorial, you can type the program listing shown on the preceeding page, and save it as *drive*\LW\PROGRAMS\681SAMP.BAS.

- □ Move the cursor to **Instruments**, in the top menu bar, and ensure that the **Wiltron 681XXA/B Synthesized Sweeper** driver is loaded. If it is not loaded, refer to pages 2-4 and 2-5 for instructions.
- □ Move the cursor to **File**, in the top menu bar, and select **Create EXE** from the pull-down menu (below).

- □ At the conclusion of the processing that occurs next, the DOS executable file W681SAMP.EXE will appear in the subdirectory containing the like-named BASIC file. Press <ENTER> to return to the LWMAKE screen. To return to the LabWindows PROGRAM window, select **QUIT**-**Return to LabWindows** from the **File** menu.
- □ To check your handiwork, choose **DOS SHELL** from the **File** menu. At the ensuing DOS prompt, type W681SAMP to run the program.

Section 3

Driver References

Section 3 Driver References

Introduction

This section lists all the 681XXA/B Instrument Driver function calls in alphabetical order. Throughout this chapter the 681XXA/B Instrument Driver will be referenced as 681XXA/B Instrument Driver.

Function Panel Structure

The 681XXA/B Labwindows Driver contains 20 panels that provide an intuitive method for coding instrument functions. Figure 3-1 shows the hierachial structure of the functional panels. Table 3-1 lists these panels and shows the page number on which they are described.

Panel Name	Page No.	Panel Name	Page No.
Alternate Sweep	3-8	Output Power	3-26
AM Modulation	3-34	Output Power Sweep	3-30
Close	3-6	Pulse Modulation	3-42
CW	3-10	Recall Setup	3-44
Delta Sweep	3-12	Save Setup	3-46
Frequency Modulation	3-38	Source Frequency Def	3-20
Frequency Setup	3-36	Special Sweep	3-14
Initialize	3-18	Start/Stop Sweep	3-16
Marker Selection	3-40	User Power Calibrate	3-28
Output Leveling	3-22	Utilities	3-48

Table 3-1.Functional Panels

Figure 3-1. Function Panel Tree

close

Function Panel Name: Close

Description:

This function closes the GPIB communications with the 681XXA/B.

Go! Keep	o! Instrum	ents Librar	ries View	Options	Help 1	Return!	
Wiltron 6	81XXA∕B Sy	nthesized Su	leeper	Close			Page 1/1

Section 3

Input Parameters:	None.
Output Parameters:	None.
Error:	LabWindows error codes only 220 to 240. 3XX Instrument Specific (Page 2-8)

Program Examples:

Quick BASIC:

REM Close communications with the driver. CALL W681.close

Microsoft C:

/* Close communications with the driver. */ $W681_close$

fc.als

Function Panel Name:

Alternate Sweep

Description:

This function lets users alternate an existing analog ramp or phase-locked sweep with another like-type sweep. The source must be sweeping prior to using this function or no action is taken.

Go! Keep! Instrument:	s Libraries View	Options Help	Return!	
Wiltron 681XXA/B Synthe	esized Sweeper	Alternate Swee	Р	Page 1/1
Alternate Sweep F1-F2= = F3-F4 Full Delta F1 Delta F5 Delta F6	Sweep Analog Ramp Step Sweep Source MUST be Swe	seping	, An Ext/Sing	frigger ito =11= gle
Required for Analog Swee Sweep Time	9p !	Required for Dwell Time	Phase Loc Numbe	ked Sweeps! er of Steps
2M S		10		Error
CALL W681.fc.als (1, 0,	0, 30, 10, 1)			
Eline 1/1 Colum	1 1 OPERATE			

Controls:

Alternate Sweep:	Lets users select the sweep range that will alternate with the primary sweep: F1–F2, F3–F4, Full, Delta F5 (Δ F5), Delta F6 (Δ F6), Delta F1 (Δ F1).
Sweep:	Lets users select an analog or a phase-locked (digitally stepped) alternate sweep.
Trigger:	Lets users select the triggering source for the alternate sweep:
Auto:	Sweep is triggered automatically by the 681XXA/B.
Ext/Single:	Sweep can be triggered manually by supplying a TTL pulse to pin 13 of the rear panel AUX I/O connector. The ability to launch a single sweep internally is currently inoperative.
Sweep Time:	Lets users enter the time required for one analog sweep (no entry required for phase-locked sweep).
Dwell Time:	Lets users enter the dwell time between adjacent fre- quency steps for a phase-locked sweep (no entry re- quired for analog sweep).

Number of Steps:

Lets users enter the number of frequency steps for a phase-locked sweep (no entry required for analog sweep).

Variable Name	Variable Variable Description		Details	Range
ALTS%	Integer	Alternate Sweep	1, F1–F2 (D) 2, Full Band 3, F3–F4 4, Delta F1 5, Delta F5 6, Delta F6	N/A

CALL W681.fc.cw (1, 0,)				
Line 1⁄1 Column 1	OPERATE			→

List Select:	Lets users select the F0-F9 frequency set or the M0-M9 frequency set.
CW Frequency:	Lets users select CW output frequency from one of the twenty user-defined frequency registers: F0 through F9 or M0 through M9 (see setcw function, page 3-35).
Frequency Selected:	Returns the CW frequency currently stored in the selected register, in MHz.

Variable Name	Variable Type	Description	Details
LS%	Integer	List Select	1 = F(freq) 2 = M(freq)
FREQSEL%	Integer	The frequency of operation	1–9

Output Parameters:

Variable Name	Variable Type	Description	Details
FSEL#	Double Precision	Frequency returned from 681XXA/B.	

Error:

LabWindows error codes only 220 to 240 3XX Instrument Specific (Page 2-8)

Program Examples:

Quick BASIC:

REM Select a CW frequency and value. CALL W681.fc.cw (LS%,FREQSEL%,FSEL#)

Microsoft C:

/* Select a CW frequency and value.*/
W681_fc_cw (LS,FREQSEL,FSEL)

fc.delta

Function Panel Name:

Delta Sweep

Description:

This function lets users set a center frequency and span for the sweep range.

Go! Keep!	Instruments	Libraries	View	O ptions	Help	Return	!	
Wiltron 681	XXA/B Synthes	sized Sweepe	r	Delta Sw	еер			Page 1/1
Center Freq F0= F1 F5 F6	uency Fred	quency Span	MHz	Analog Ra Step Swe	Sweer amp =11 eep	Ext/	T: Au Sing	rigger to -11- le 11

CALL W681.fc	.delta (0, ,	0, 0, 30, 1	0, 1)					
Line 1/1	Column	1 0PE	RATE	←∎				÷

Center Frequency:	Lets users select (Delta- F (Δ Fn) center frequency) a frequency storage location: 1, 5, or 6.
Frequency Span:	Lets users select a sweep width (span) in MHz. The 681XXA/B will sweep upwards in frequency from Center - (span/2) to Center + (span/2).
Sweep:	Lets users select either an analog or a phase-locked digitally stepped sweep.
Trigger:	Lets users select the triggering source for the delta sweep:
Auto:	Sweep is triggered automatically.
Ext/Single:	Sweep can be triggered manually by supplying a TTL pulse to pin 13 of the rear panel AUX I/O connector. The ability to launch a single sweep internally is currently inoperative.
Sweep Time:	Lets users enter the time required for one analog sweep.
Dwell Time:	Lets users enter the dwell time for a phase-locked sweep.
Number of Steps:	Lets users enter the number of frequency steps for a phase-locked sweep.
Input Parameters:	(D) is default setting.

Variable Name	Variable Type	Description	Details	Range
CFREQ%	Integer	Center Frequency	1, F1 (D) 5, F5 6, F6	
FSPAN#	Double Precision	Frequency Span(MHz)		(Analog Sweep) 1 MHz to full range of 681XXA orB. (Digital Sweep) 1 kHz to full range of 681XXA or B.
SWEEP%	Integer	Ѕweep Туре	0, Analog Ramp (D) 1, Step Sweep	
TRIGG%	Integer	Trigger Conditions	0, Auto (D) 1, Ext/Single (Currently inoperative)	
SWEEPT#	Double Precision	Analog Sweep Time	30 mSec (D)	30 ms to 99 s.
DTIME#	Double Precision	PhaseLocked Dwell Time	10 mSec (D)	1 ms to 99 s.
NUMST%	Integer	Number of Steps For Phase Locked Sweeps	1 (D)	1 to 10,000 steps

Output Parameters:

None.

Error: LabWindows error codes only 220 to 240 3XX Instrument Specific (Page 2-8)

Program Examples:

Quick BASIC:

REM Selects delta sweep. CALL W681.fc.delta (CREQ%, FSPAN#, SWEEP%, TRIGG%, SWEEPT#, DTIME#, NUMST%)

Microsoft C:

/* Selects delta sweep. */
W681_fc_delta (CREQ, FSPAN, SWEEP, TRIGG, SWEEPT, DTIME, NUMST);

fc.spec

Function Panel Name: Special Sweep

Description:

This function lets users specify frequencies and the order that the frequency will be output. The operator can specify up to 1000 discrete frequencies.

Data Select:	Lets users select between new and existing *.wsw (disk file) data.
Array Name:	Lets users enter the name of the data-array holding the new or existing data. If no array name is entered, the special sweep will still be generated. However, it will not be stored to disk in the current default directory.
Number of Elements:	Enter the number of frequencies for a user-defined special sweep. The number of steps = (the number of frequencies -1).

Variable Name	Variable Type	Description	Details
DSEL%	Integer	Data select	0 = New data file 1 = Existing data file
DPTS%	Integer	Number of Elements	Number of frequencies to be entered or recalled.
TEST\$	String	File Name	If no file name is entered the special sweep is still generated but not saved. The driver automatically appends a ".wsw" extension to the user-entered filename. The file is saved to the current default directory.

Input Parameters: Same as controls.

Output Parameters:	None.
Error:	LabWindows error codes only 220 to 240. If debug 3XX Instrument Specific (Page 2-8)

Program Examples:

Quick BASIC:

REM Lets operator enter frequencies in Gigahertz for a user-defined (special) sweep.

CALL W681.fc.spec (DSEL%,DPTS%,TEST\$)

Microsoft C:

 $^{\prime *}$ Lets operator enter frequencies in Gigahertz for a user-defined $% 10^{\circ}$ (special) sweep. $^{\ast \prime }$

W681_fc_spec (DSEL,DPTS,TEST)

fc.stst

Function Panel Name: Start/Stop Sweep

Description:

This function lets users select the 681XXA/B sweep range. The function uses the existing definitions for CW frequencies. The user has the opportunity to select the source trigger conditions and set sweep time — if in analog sweep. Or they can select dwell time and number of steps — if in phase locked sweep.

Go! Keep! Instruments	Libraries View	Options Help Return!	
Wiltron 681XXA/B Synthes	sized Sweeper	Start/Stop Sweep	Page 1/1
Sweep Range F1-F2 F3-F4 Full Band-	Swe Analog Sweep= Step Sweep	eep = Ext/S	Trigger Auto= ingle

Microsoft C:

/* Get the value for up to nine frequencies. */ W681_init_freq (F0,F1,F2,F3,F4,F5,F6,F7,F8,F9 M0,M1,M2,M3,M4,M5,M6,M7,M8,M9)

pc.level

Function Panel Name:

Output Leveling

Description:

This function lets users select the power leveling mode(s).

Go! Keep! Inst	ruments Libra	aries View	Options Help	p Return!	
Wiltron 681XXA/B	Synthesized S	Sweeper	Output Leveli	ing	Page 1/1
Leveling Fixed Gain= = Internal External Det Ext Pwr Mtr	ALC In Rear Front	I Level (Of	External Level: Correction	ing Functions External Ø	s Gain DAC
Additional 681XXB ALC Attenuation Decouple Coupled	Capability ALC step f	Attenuator			
ALC Power Slope	Power Slo	GHz	Power Sloy 256	pe Value	Error
CALL W681.pc.leve	l (0, 0, 0, 0, 0, Column 1	0, ''00'', 0 Operatie), 2, 256) ← ∎		→

Leveling	Lets users select the leveling mode for the output power.
Fixed Gain:	ALC is disabled. The RF Level DAC and step attenu- ator (if installed) control the relative power level. Power is not detected at any point, and the absolute power level is uncalibrated.
Internal:	Output power is leveled using an internal detector in the directional coupler to sample the output signal.
External Det:	Output power is leveled using an external detector to sample the output signal.
Ext Pwr Mtr:	Output power is leveled by using the "recorder voltage" from an external power meter. The 681XXA/B is compat ible with power meters having a ±1 V full scale analog output.
ALC In:	Lets user select rear or front panel ALC input for exter- nal leveling.

External Leveling Functions:	
Level Correction:	Turns the leveling correction from the external detector or power meter on or off.
Ext Gain DAC:	Allows adjustment of the external-level-gain DAC to op- timize loop stability.Enter a value between 0 and 256.
ALC Step Attenuation:	Couples or decouples the step attenuator from the ALC loop.
ALC Step Attenuator:	Pressing the right arrow turns the optional step attenu- ator on and increases it in 10 dB steps to 110 dB.
ALC Power Slope:	Lets users turn ALC power slope on or off. Power slope compensates for system, cable, and waveguide vara- tions due to changes in frequency.

- **Power Slope Pivot:** Lets user enter a model-dependent frequency value for the power slope pivot point. Pivot point can be any frequency within the range of the instrument.
- **Power Slope Value:** Lets user enter a value for the ALC slope DAC of between 0 and 256.

(D) is default setting

W681.pc_level (LEV,ALCCP,LVC,EXG,EXDAC,
ALCIN,ATT,ALCPS,PVT,VL)

pc.pwr

Function Panel Name:

Output Power

Description:

This function lets users set the output power level using an editable list of values. It also provides for turning the level offset function on or off and setting its value.

Power List Select:	Lets users select a power level parameter for loading in the 681XXA/B.
L0 – L9:	Opens the selected parameter and lets its value to be set and selected as the instrument output power level.
Load All:	Opens all parameters and lets their value be set and the L9 parameter selected as the instrument output power level.
RF On/Off:	Lets users turn the RF output power on or off.
Offset:	Lets users turn the Level Offset function on or off.
Level Offset:	Lets user enter a level offset value, when the function is turned on. This value compensates for a device in the output line that alters the level of the output power sig- nal before being applied to the device-under-test.
L0 thru L9:	Provide for entering power level values.

Section 3

pc.pwr.cal

Function Panel Name:

Description:

User Power Calibrate

This function lets users enable and disable up to five internal power level correction tables created using the 681XXB User Cal feature. This function also permits the user to upload and download the user cal cata for all five table from an external computer. The purpose of the User Cal feature is to provide compensation for power level variations caused by external switching, amplifiers, couplers, and cables in the test setup.

CALL W681.pc.pwr	.cal (0, 3, 3)			
Line 1/1	Column 1	OPERATE	←∎		-

User Calibrations:	Lets users activate a numbered, pre-defined, powe level-flatness-correction table stored within the 681XXB.	
Define Calibration:		
Off:	Lets users turn the level-correction feature off.	
Upload:	Uploads to disk all five of the level-correction tables stored in the 681XXB to the filename specified in the "File Name" field.	

Download:

Downloads data from the disk "File Name" file to the 681XXB that fills all five memory "User x" locations in the 681XXB.

CAUTION

Downloading data from the disk overwrites any data that was previously stored in these User x memory locatgions.

Input Parameters:

(D) is default setting.

Variable Name	Variable Type	Description	Details
UCAL%	Integer	User Calibration	0 =Off (D) 1 = User 1 2 = User 2 2 = User 3 4 = User 4 5 = User 5

/* Define the power sweep. */
W681_pc_pwrs (PST,LVL1,LVL2,NUMST,DWT,LVLS1,LVLS2)

setam

Function Panel Name:

Ampliltude Modulation

Description:

This function lets users set amplitude modulation (AM) parameters.

A.M. Select:	Lets users turn AM modulation on or off. Lets users choose between log and linear AM modes.	
A.M. Mode:		
Log:	In this mode, sensitivity is 10 dB/V and the 681XXA accepts a wider range of input signal from the external signal generator. For every -1V input, the RF output level decreases by 10 dB. For every +1V input, the RF output level increases by 10 dB.	
Linear:	In this mode, sensitivity is $100\%/V$ and the 681XXA accepts a $-1V$ to $+1V$ input signal from an external signal generator. The amplitude of the RF output changes linearly as the AM input changes.	
Mod Input:	Lets users select front or rear panel AM IN connector.	
Impedance:	Lets users select 50Ω or 600Ω input impedance.	

Variable Name	Variable Type	Description	Details
FON%	Integer	AM On:	0, Off (D) 1, On
STYPE%	Integer	AM Mode select	0, Linear (D) 1, Log
INSEL%	Integer	Front or Rear panel AM INPUT select	0, Rear (D) 1, Front (Currently inoperative)
ZSEL%	Integer	Impedance select	0, 50 Ohm (D) 1, 600 Ohm

(D) is default setting.

Output Parameters:

None.

Error:

LabWindows error codes only 220 to 240 3XX Instrument Specific (Page 2-8)

Program Examples:

Quick BASIC:

REM Set modulation values for AM. CALL W681.setam (FON%,STYPE%,INSEL%,ZSEL%)

Microsoft C:

/* Set modulation values for AM. */
W681_setam (FON,STYPE,INSEL,ZSEL)

setcw

Function Panel Name:

Frequency Setup

Description:

This function lets users define frequencies for any of the twenty 681XXA/B storage registers.

Controls:

List Select:

Lets users select the F0-F9 set, M0-M9 set, or both sets for assignment of frequency values. If "Both" is selected, all defined frequencies will be loaded and the 681XXA/B will be set to output the M-frequency selection (1-9 on Frequency Select control).

Frequency Select:	Lets users select any single frequency storage location, or to select all twenty at one time. If more than one fre- quency is to be defined, the switch must be set to the Load All position. Press the <page down=""> key to call up page 2 and the Mx set for assigning frequency definitions</page>
F0 thru F9	Let users enter a frequency value in MHz for storage in
M0 thru M9:	the applicable location (register).

Variable Name	Variable Type	Description
FREQSEL%	Integer	Selects Frequencies 1–20, where 20 loads all frequencies. If any other value, it selectively loads that value into the corresponding register. If a selective load is used, that frequency then becomes the active output frequency. If load all is selected (10), then frequency register 9 (F9) becomes the active output when the function is complete.
FRx#	Real	Frequency to be loaded into the storage registers.
MFx#	Real	Frequency to be loaded into the storage registers.

Output	Parameters:
--------	-------------

Error:	LabWindows error codes only 220 to 240
	3XX Instrument Specific (Page 2-8)

None.

Program Examples:

Quick BASIC:

REM Select a cw frequency storage location and load frequency value. CALL W681.setcw (FREQSEL%,FR0#,FR1#,FR2#,FR3#,FR4#,FR5#,FR6#,FR7#,FR8#, FR9#,MF0#,MF1#,MF2#,MF3#,MF4#,MF5#,MF6#,MF7#,MF8#,MF9#)

Microsoft C:

/* Select a cw frequency storage location and load frequency value. */ W681_setcw (FREQSEL,FR0,FR1,FR2,FR3,FR4,FR5,FR6,FR7,FR8, FR9,FR0,MF1,MF2,MF3,MF4,MF5,MF6,MF7,MF8,MF9)

setfm

Function Panel Name:

Frequency Modulation

Description:

This function lets users set modulation parameter for frequency modulation using an external modulation source.

FM:	Lets users select FM bandwidth or turn FM on or off.
FM Wide:	Select the wide FM mode that allows for maximum de- viations of 100 MHz.
FM Narrow:	Select the narrow FM mode that allows for maximum deviations of 50 MHz.
Mod Input:	Lets users select front or rear panel FM IN connector. (Currently, only the rear panel input can be pro- grammed.)
Impedance:	Lets users select 50Ω or 600Ω input impedance.
FM Sensitivity MHz/V:	Lets users enter the FM sensitivity value.

(D) is default setting.

Variable Name	Variable Type	Description	Details
FON%	Integer	FM	0 = Off (D) 1 = On 2 = Wide 3 = Narrow
MODIN%	Integer	Modulation Input	3 = Front 4 = Rear (D)
IMPED%	Integer	Impedance	5 = 50 Ohms (D) 6 = 600 Ohms
SENS#	Real	FM Sensitivity in MHz/Volt	1 = 6 MHz/V 2 = 10 MHz/V 3 = 20 MHz/V

Output Parameters:

None.

Error:	LabWindows error codes only 220 to 240
	3XX Instrument Specific (Page 2-8)

Program Examples:

Quick BASIC:

REM Setup 681XXA for external fm. CALL W681.setfm (FON%,MODIN%,IMPED%,SENS#)

Microsoft C:

/* Setup 681XXA for external fm. */ W681_setfm (FON,MODIN,IMPED,SENS)

setmk

Function Panel Name:

Marker Selection

Description:

This function lets users set video and intensity markers.

Go! Keep! Ins	truments Li	braries View	0ptions	Help Retur	n!

CALL W681.setmk	(1, 0, 0, 0,	0, 0, 0, 0,	0, 0, 0, 0)	
Line 1/1	Column 1	OPERATE			→

List Select:	Lets users select the F0-F1 or M0-M1 frequency set.
Marker Selection:	Lets users disable markers or select between Intensity and Video markers.
Disable:	Disables the frequency markers.
Intensity:	Enables an intensified dot to mark the frequency, pro- vided the selected marker frequency is within the se- lected frequency range. (Only available in analog sweep mode.)
Video:	Enables a video pulse to mark the frequency, provided the selected marker frequency is within the selected fre- quency range.
0 thru 9:	Turns marker on or off at the frequency stored in locations F0 thru F9 or M0 thru M9, based on the posi- tion of the List Select control.

Variable Name	Variable Type	Description	Details

setpm

Function Panel Name: Square Wave (Pulse)

Description:

This function lets users set square wave modulation parameters.

Mod Source:	Lets users select a square wave modulation source: Ex- ternal or Internal. The external mode allows an exter- nal TTL level square wave to modulate the RF output.
Mod Input:	Lets users select front or rear panel IN connector.
Ext Gate Polarity:	Lets users select the polarity of the square wave signal (L [low], or H [high]) that turns the RF on.
PRF (Internal):	Lets users select the internal square wave generator's output modulating frequency, 400 Hz, 1 kHz, 7.8125 kHz, or 27.8 kHz.

Variable Name	Variable Type	Description	Details
MODS%	Integer	Modulation Source	0, Internal (D) 1, External
MODIN%	Integer	Modulation input select	0, Rear 1, Front (Currently inoperative)
XSP%	Integer	Modulating signal Polarity select	0, H RF On 1, L RF On
IPRF%	Integer	PRF (Internal) select	1, 400 Hz 2, 1 kHz 3, 7.8125 kHz 4, 27.8 kHz

(D) is default setting.

Output	Parameters:
